

# Comparison of different measures of scientific productivity and bibliography

Oleh Shkalikov   Matteo Zannini   Qader Qaribiyani

TU Dresden, Computer Science Faculty

December, 2022

# Agenda

## 1 Introduction

## 2 Bibliometrics

- Impact factor

## 3 Researcher's metrics

## Scientific productivity

how much output does a scientist produce within a certain time period

The major outputs from the research :

- Publications

- Patents

- Product developments

Among the publication forms, peer-reviewed journal articles are most frequently used as a productivity measure.

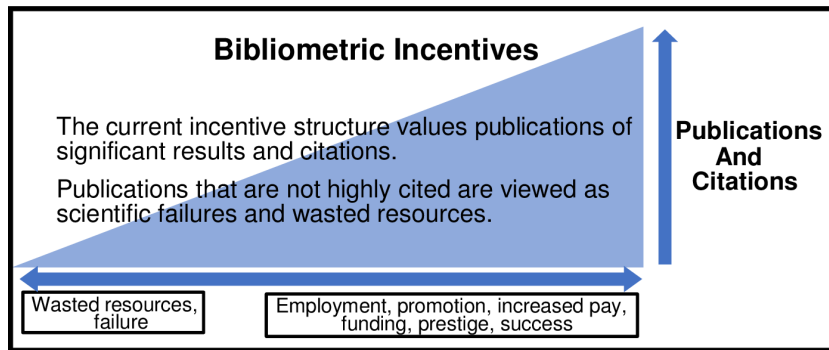

Figure 1: The current bibliometrics incentives model.

# Impact factor

The Impact Factor is the average number of citations received by articles in a journal within a two-year window

$$IF(x) = \frac{Citations(x)}{Publications(x-2) + Publications(x-1)}$$

For example, Nature had an impact factor of 49.962 in 2020:

$$IF(2020) = \frac{Citations(2020)}{Publications(2018) + Publications(2019)} = 49.962$$

Note that 2020 impact factors are reported in 2021; they cannot be calculated until all of 2020 publications have been processed by the indexing agency.

# Impact factor limitations

## Pros

- ✓ it helps compare journals of the same field. It gives an idea of the journal's relative importance and reputation.

# Impact factor limitations

## Props

- ✓ it helps compare journals of the same field. It gives an idea of the journal's relative importance and reputation.

## Cons

- ✗ The Impact Factor is an arithmetic mean and doesn't adjust for the distribution of citations

# Impact factor limitations

## Props

- ✓ it helps compare journals of the same field. It gives an idea of the journal's relative importance and reputation.

## Cons

- ✗ The Impact Factor is an arithmetic mean and doesn't adjust for the distribution of citations
- ✗ Citations are only included if they appeared in a journal listed in the Citation Indexes

# Impact factor limitations

## Props

- ✓ it helps compare journals of the same field. It gives an idea of the journal's relative importance and reputation.

## Cons

- ✗ The Impact Factor is an arithmetic mean and doesn't adjust for the distribution of citations
- ✗ Citations are only included if they appeared in a journal listed in the Citation Indexes
- ✗ Impact Factors can show significant variation year-on-year.

# Impact factor limitations

## Props

- ✓ it helps compare journals of the same field. It gives an idea of the journal's relative importance and reputation.

## Cons

- ✗ The Impact Factor is an arithmetic mean and doesn't adjust for the distribution of citations
- ✗ Citations are only included if they appeared in a journal listed in the Citation Indexes
- ✗ Impact Factors can show significant variation year-on-year.
- ✗ Not every journal has an Impact Factor.

# Impact factor limitations

## Props

## Cons

- ✗ The Impact Factor is an arithmetic mean and doesn't adjust for the distribution of citations
- ✗ Citations are only included if they appeared in a journal listed in the Citation Indexes
- ✗ Impact Factors can show significant variation year-on-year.
- ✗ Not every journal has an Impact Factor.

# Altmetric Attention Score

The Altmetric Attention Score tracks a wide range of online sources to capture the conversations happening around academic research.

# Advantages to using altmetrics and limitations

# Advantages to using altmetrics and limitations

## Props

- ✓ They are quicker to accumulate than citation-based metrics

# Advantages to using altmetrics and limitations

## Props

- ✓ They are quicker to accumulate than citation-based metrics
- ✓ They can capture more diverse impacts than citation-based metrics

# Advantages to using altmetrics and limitations

## Props

- ✓ They are quicker to accumulate than citation-based metrics
- ✓ They can capture more diverse impacts than citation-based metrics
- ✓ They apply to more than journal articles and books

# Advantages to using altmetrics and limitations

## Props

- ✓ They are quicker to accumulate than citation-based metrics

# Blocks and columns and simple animation

## Sample ordinary block

You can use *columns* environment to split a slide into 2 or more parts.

## Props and cons lists

Use *proplist* and *conslist* environments to show props and cons as a list respectively.

# Blocks and columns and simple animation

## Sample ordinary block

You can use *columns* environment to split a slide into 2 or more parts.

## Props and cons lists

Use *proplist* and *conslist* environments to show props and cons as a list respectively.

### Props

- ✓ First benefit

- ✗ Third disadvantage

## Sample example block

Example: For example you can implement props and cons with use of columns.

# Sample citations

## Citation in $\text{\LaTeX}$ with Bibtex

To cite something just add your bibitem in *references.bib* file and use *cite* command with corresponding name. Everything else will happen **automatically!**

I claim something very important and have to cite this paper [?], this article [?], book [?] and preprint [?].

## Where to find citation bibtex item

Please use citation *BibTeX* item from Google Scholar

Figure 2: Big picture

If you want 2 side image, use *subfigures*

(a) White

(b) Blue

Figure 3: Main caption

# References I
