Comparison of different measures of scientific productivity and bibliography

Oleh Shkalikov   Matteo Zannini   Qader Qaribiyan

TU Dresden, Computer Science Faculty

December, 2022

Agenda

Scientific Productivity

Scientific productivity

how much output does a scientist produce within a certain time period

The major outputs from the research :

Publications

Patents

Product developments

Among the publication forms, peer-reviewed journal articles are most frequently used as a productivity measure.
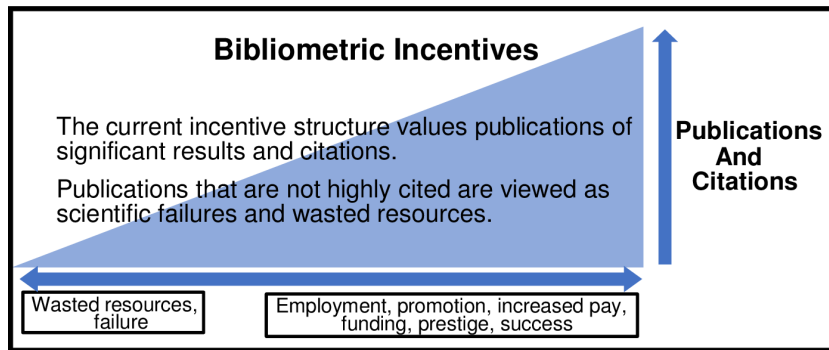

Figure 1: The current bibliometrics incentives model.

Impact factor

The Impact Factor is the average number of citations received by articles in a journal within a two-year window

$$IF(x) = \frac{Citations(x)}{Publications(x-2) + Publications(x-1)}$$

For example, Nature had an impact factor of 49.962 in 2020:

$$IF(2020) = \frac{Citations(2020)}{Publications(2018) + Publications(2019)} = 49.962$$

Note that 2020 impact factors are reported in 2021; they cannot be calculated until all of 2020 publications have been processed by the indexing agency.

Impact factor limitations

Impact factor limitations

Props

✓ it helps compare journals of the same field. It gives an idea of the journal's relative importance and reputation.

Impact factor limitations

Props	Cons
✓ it helps compare journals of the same field. It gives an idea of the journal's relative importance and reputation.	✗ The Impact Factor is an arithmetic mean and doesn't adjust for the distribution of citations

Impact factor limitations

Props

✓ it helps compare journals of the same field. It gives an idea of the journal's relative importance and reputation.

Cons

✖ The Impact Factor is an arithmetic mean and doesn't adjust for the distribution of citations

✖ Citations are only included if they appeared in a journal listed in the Citation Indexes

Impact factor limitations

Props

✓ it helps compare journals of the same field. It gives an idea of the journal's relative importance and reputation.

Cons

✖ The Impact Factor is an arithmetic mean and doesn't adjust for the distribution of citations

✖ Citations are only included if they appeared in a journal listed in the Citation Indexes

✖ Impact Factors can show significant variation year-on-year.

Impact factor limitations

Props

✓ it helps compare journals of the same field. It gives an idea of the journal's relative importance and reputation.

Cons

✖ The Impact Factor is an arithmetic mean and doesn't adjust for the distribution of citations

✖ Citations are only included if they appeared in a journal listed in the Citation Indexes

✖ Impact Factors can show significant variation year-on-year.

✖ Not every journal has an Impact Factor.

Cons

✖ The Impact Factor is an arithmetic mean and doesn't adjust for the distribution of citations

✖ Citations are only included if they appeared in a journal listed in the Citation Indexes

✖ Impact Factors can show significant variation year-on-year.

✖ Not every journal has an Impact Factor.

Altmetric Attention Score

The Altmetric Attention Score tracks a wide range of online sources to capture the conversations happening around academic research.

Blocks and columns and simple animation

Sample ordinary block

You can use *columns* environment to split a slide into 2 or more parts.

Props and cons lists

Use *propslist* and *conslist* enveroments to show props and cons as a list respectively.

Blocks and columns and simple animation

Sample ordinary block
You can use *columns* environment to split a slide into 2 or more parts.

Props and cons lists
Use *propslist* and *conslist* enveroments to show props and cons as a list respectively.

Props

✓ First benefit

	✖ Third disadvantage

Blocks and columns and simple animation

Sample ordinary block
You can use *columns* environment to split a slide into 2 or more parts.

Props and cons lists
Use *propslist* and *conslist* enverements to show props and cons as a list respectively.

Props	Cons
✓ First benefit	✗ First disadvantage
✓ Second benefit	✗ Second disadvantage
	✗ Third disadvantage

Sample example block
Example: For example you can implement props and cons with use of columns.

Sample citations

Citation in LaTeX with Bibtex

To cite something just add your bibitem in *references.bib* file and use *cite* command with corresponding name. Everything else will happen **automatically**!

I claim something very important and have to cite this paper [**?**], this article [**?**], book [**?**] and preprint [**?**].

Where to find citation bibtex item

Please use citation *BibTeX* item from Google Scholar

Inserting images

Figure 2: Big picture

If you want 2 side image, use *subfigures*

(a) White

(b) Blue

Figure 3: Main caption
